- Pressure-Sensitive Cured Cover Strip (By installer)
- **G** Approved Roofing Membrane (By installer)

# Installation: Snap Gravel Stop HD

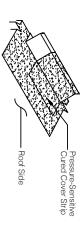

### Step 1: Installing 22ga Galvanized Cleat

- treated wood nailing plate. the edge of the roof membrane over the Place the face of the Cleat squarely on
- Press securely in position and nail through the pre-punched face holes with 1-1/4" S.S. Ring Shank Nails
- continuous Cleat line. For Miter application, miter cut into corner as required to maintain a
- Then nail at a minimum 6" in each direction from the corner or closer at special conditions.

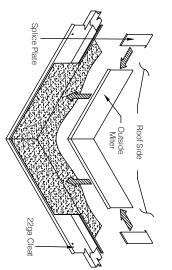

## Step 2: Installing Pressure-Sensitive Cured Cover Strip

Cover Strip to cant of 22ga Cleat and down Cleat face per roofing membrane manufacturer's installation

## Step 3: Installing Snap Gravel Stop Miters

- for appropriate corners. Locate the Miters and Splice Plates
- Place a Splice Plate under each end of the Miter sections.
- Install the Miter by hooking the Snap Gravel Stop Miter onto the kickout of the Cleat, and rotate back onto the Cleat.

## Step 4: Installing Snap Gravel Stop End Caps/Terms

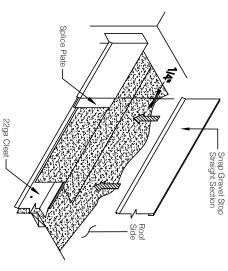

Install the Gravel Stop End Caps and End Terms by hooking the drip of the Snap Gravel Stop End or Term onto the kickout of the Cleat, and rotating back onto

## Step 5: Installing Snap Gravel Stop Straight Lengths

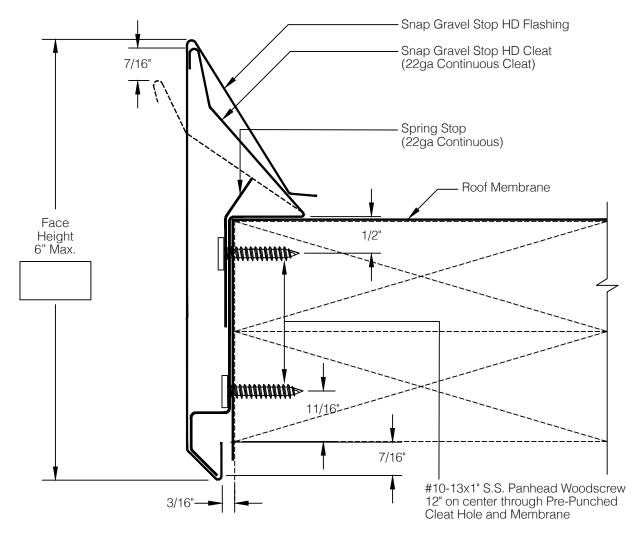

- Place a Splice Plate in the Miter or End Cap. opposite end of the installed
- Install Snap Gravel Stop by hooking the Gravel Stop onto the kickout of the Cleat, and rotating back onto the Cleat. Allow 1/4" gap between Snap Gravel Stop lengths for thermal expansion.
- Consider lengths of all straight pieces prior to cutting to avoid creating relatively short sections adjacent to one another.

Note: There should be a Splice Plate at every joint.

### Snap Gravel Stop HD

### **Detail:** Snap Gravel Stop HD – high-performance

### Notes:

- Isolate all metal parts from ACQ treated wood or other galvanically incompatible material with appropriate membrane material.
- 2. Appliance attachments, such as lightning rods, signs, or antennae that penetrate the water seal, induce a galvanic reaction, or otherwise compromise the effectiveness of the roof edge system, shall be eliminated or isolated to prevent problems per section 8.0 if ANSI/SPRI ES-1. Appliances should also be isolated from, or not attached to, the roof edge system. Consult the lightning protection system manufacturer for specific attachment instructions.
